

Soap water and Hot-pepper water

Cho Global Natural Farming (CGNF)

Soap water and Hot-pepper water

- Soap water and hot-pepper water are used for controlling aphids and mites in Natural Farming.
- When soap water is sprayed to the plant, water is evaporated by the sunlight. Due to evaporation, heat loss and condensation, aphids burst and die

How to make and use soap water

(1) Cut 200g of laundry soap into small pieces.

How to make and use soap water

(2) Boil 20ℓ of water with soap pieces, until it becomes like a thick soup.

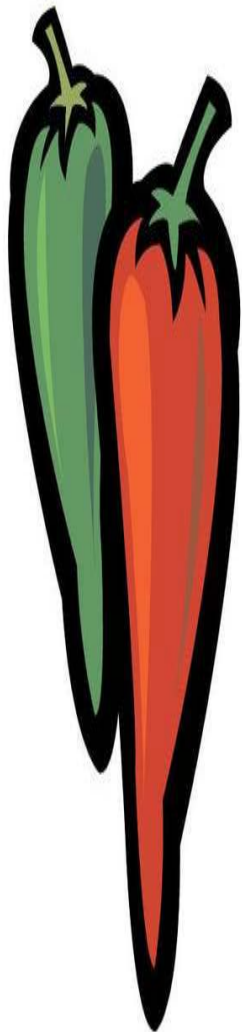

How to make and use soap water

- (3) Cool and mix it with 200ℓof water (it is called 'turbid water').

- (4) For aphid control, mix 0.7ℓof turbid water with 20ℓof water.

- (5) For mite control, mix 0.5ℓof turbid water with 20ℓof water.

How to use hot-pepper water

Repel the aphids with the hot taste of pepper.

Cut 10~12 hot peppers into pieces and put them in 1ℓ of water.

Boil the water until when the content reduces to 1/2 of the original volume.

Cool and mix it with 20ℓ of water for spraying.
